Wellness & Aesthetics Technology

Unlock the Power of Multi-Wavelength LED Phototherapy

WA DermaLight is a commercially driven LED phototherapy platform designed to expand your treatment offering, increase client spend, and maximise treatment room utilisation. LED phototherapy, also known as low-level light therapy (LLLT), is a non-invasive treatment that uses specific wavelengths of visible light to support cellular activity,

tissue repair and skin renewal.

Features:

Commercial-grade construction designed for continuous daily use

Deliver light across the visible spectrum, supporting a wide range of skin health applications.

LED phototherapy is a technology widely used in FDA-cleared dermatological and therapeutic applications, providing confidence in safety and efficacy.

The WA DermaLight is designed for operator-free or low-touch sessions, improving revenue scalability and lower overheads. This enables you to deliver several types of skin treatments with one single device and achieve higher revenue per square metre of clinic space.

Professional LED Phototherapy for Face & Upper Body

Compact, space-efficient design for facial and upper-body LED phototherapy.

Specifications:

Dimensions (external) 53 x 33.5 x 33cm
