

CARE OF YOUR PEDICURE / MANICURE BOWL

Please note that **oxidisation** is a natural process when metal comes in contact with water, especially salty water. We therefore recommend following precautions:

- The brass or copper vessel is washed with fresh water after every use.
- Towel dry your bowl to prevent water spots.
- Regularly apply wax at the end of the day to prevent oxidisation and have long lasting finish.
- We don't recommend citronella cleaning products, lemon oil, straight bleach, any strong cleaning agent or Barbicide.
- You can use mild bleach solution (1 part bleach and 3 parts water) or hospital grade disinfectant to clean them.

Metals will always react with salty water and other chemicals hence we would not be able to offer any warranty for any discolouring or corrosion happening during usage.

Proper maintenance, as mentioned above will be helpful to prevent corrosion and have long lasting finish.
