madebyzen

The Nitrum collection of glass aroma diffusers from madebyzen® captures the essence of artisanal glass art. Our designers have combined both ancient and modern cutting edge techniques to create a visually stunning, modern and on trend range of diffusers.

The Pearl aroma diffuser adds elegance to any décor with its mother of pearl style glass mosaic finish. It emits a soft light to create a calming atmosphere in a darkened room. The luminous mosaic creates a captivating display as it bounces natural or artificial light onto ceilings and walls.

Soft ambient light through low energy bulbs to help relaxation

Suitable for use with any essential or fragrance oils.

Use with tap water. The humidifying mist is ideal for counteracting some of the dryness created by today's central heating and air conditioning systems.

Ultrasonic technology is used to release a heatless, completely safe, fine mist of scented vapour into the atmosphere to stimulate your senses and enable you to sink into a relaxed world of healing and self-balance. This is believed to be the best way to diffuse any fragrance into the atmosphere, as without direct heat, essential oils are not degraded.

The Pearl aroma diffuser automatically shuts off when the water falls below a certain level, effecting complete safety and ideal for use around children or pets.

Intermittent mist control will automatically switch the diffusion of scent and mist, on and off every few seconds, which is ideal when using stronger scents.
